

Security system

The Access control is going to be necessary.

security system by restriction of particular area is necessary, because importance of information and demand of security are increasing according to departmentalization and specialization of industry by social evolution.

- Needlessness of communication wiring between household and public entrance.
- Needlessness of intercom(videophone) replacement currently in use
- Installation period is very short and cost is also reasonable.
- remote control from management office (card registration, notice, opening the door artificially)
- opening the door by adjoining card
- opening the door by telephone and remote
- control from household, security office, management office
- opening the door after identifying visitor during out going, vacation
- secure visitor's video by Web Camera (save, search)
- Telephone ring notification service of family's coming home
- text messaging service of children coming home
- car owner verification and car owner call function (request to move car)
- electronic display function of apartment notice (neighborhood meeting, cut off the water, construction, water cleaning)
- video advertisement function of surrounding shopping area (supermarket, department store, internet)
- automatic standby service of elevator (to the first floor)
- alarm function interlocking with crime prevention sensor (veranda, gas pipe)
- artificially opening door function by fire signal

Application

center call center
